About WWF-Singapore

WWF is one of the world's largest and most respected independent conservation organisations. Our mission is to stop the degradation of the earth's natural environment and to build a future in which humans live in harmony with nature.

As one of WWF's international hubs, the WWF-Singapore office supports a global network spanning over 100 countries. We help protect Singapore's essential needs through the actions of individuals, businesses and governments in the region. To meet key conservation goals, we address issues such as deforestation, haze pollution, food security, sustainable consumption and illegal wildlife trade.

About Hatch Blue

HATCH was conceived in late 2017 as the world's first aquaculture accelerator with the goal to revolutionise the way we produce seafood. Our vision is to catalyse farmed and alternative seafood innovation through responsible investment, expertise and insights as part of a strong committed community.

After four years in operation, HATCH has invested in 37 companies, run three successful cohorts, raised its first US \$8M fund and established offices in Hawaii, Norway and Singapore. The team has grown to 16 full-time members spread across the globe, who run the three business units of Hatch – our accelerator program, our fund and our innovation services.

About Aquaculture Innovation Centre

Aquaculture Innovation Centre (AIC) is the youngest Centre of Innovation funded and established by Enterprise Singapore to serve the needs of the local aquaculture industry. The national centre adopts an inclusive and collaborative approach involving universities and polytechnics to ensure a sustainable partnership. The collaborative model allows AIC to tap on shared expertise, facilities and equipment to provide the best fit solution for addressing the needs of the aquaculture industry.

Since inception in July 2019, AIC has delivered at least 63 industry consultancy projects for farms and enterprises locally and overseas as well as 25 skill-based training programmes and workshops for the local aquaculture industry. AIC also collaborates with Singapore Food Agency in training farms on SS 670 : 2021 Specification for Good Aquaculture Practices for farm certification.
